                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 10

US-07-741-453A-25

Sequence 25, Application US/07741453A

Patent No. 6228597

GENERAL INFORMATION:

APPLICANT: PARMINIER, MARC

APPLICANT: USERT, FREDERIC

APPLICANT: VASCAT, GILDER

TITLE OF INVENTION: POLYPEPTIDES HAVING THYROTROPIN-RECEPTOR

TITLE OF INVENTION: ACTIVITY, NUCLEIC ACID SEQUENCES CODING FOR SUCH RECEPTORS

TITLE OF INVENTION: ACTIVITY, NUCLEIC ACID SEQUENCES CODING FOR SUCH RECEPTORS

TITLE OF INVENTION: AND POLYPEPTIDES, AND APPLICATIONS OF THESE POLYPEPTIDES

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 15, Application US/09534639
Patent No. 6251399
GENERAL INFORMATION:
APPLICANT: Diamond, Don J
APPLICANT: York, Joanne
TITLE OF INVENTION: IMMUNO-REACTIVE PEPTIDE CTL EPITOPES OF HUMAN
FILE OF INVENTION: CYTOMEGALOVIRUS
FILE REFERENCE: 1954-343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

Acta Crystallogr. D 55:1773-1784(199).

-i- FUNCTION: SPECIFIC CLASS OF HIGH-REDOX-POTENTIAL 4FE-4S

-i- FUNCTION: SPECIFIC CLASS OF HIGH-REDOX-POTENTIAL AFE-4S

-i- FUNCTION: PUNCTIONS IN ANMEROBIC ELECTRON TRANSPORT IN MOST

PURPLIE AND IN SOME OTHER PHOTOSYNTHETIC BACTERIA AND IN AT LEAST

ONE GENUS (PARACOCCUS) OF HALOPHILIC, DENITRIFYING BACTERIA.

-i- SUBDITI: HOMODIMER (PROBABLE).

-i- SUBGELLUTAR LOCATION: Periplasmic.

-i- SIMILARITY: BELONGS TO THE HIGH POTENTIAL IRON-SULFUR PROTEIN
                                                                                                                                                                                                                                             STRUCTURE BY NMR OF MUTANT SER-114.

-!- FUNCTION: HAS AN IMPORTANT FUNCTION AS A REPAIR ENZYME FOR PROTEINS THAY BEEN INACTIVATED BY OXIDATION. CATALYZES THE REVERSIBLE OXIDATION-REDUCTION OF METHIONINE SULPOXIDE IN PROTEINS TO METHIONINE.

-!- CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin = protein L-methionine S-oxide + reduced thioredoxin.

-!- SIMILARITY: BELONGS TO THE MSRA MET SULPOXIDE REDUCTASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=20519025; PubMed=11063566;
